## **Rain Barrel Sale**

# Got Rain?

## What is a rain barrel?

A rain barrel is a water tank which is used to collect and store rainwater runoff, typically from rooftops via rain gutters. Rain barrels are devices for collecting and maintaining harvested rain.

## Rain Barrel Benefits

1. It reduces flooding in basements and yards.
2. If you water your plants, then this is a good way to reduce your water bill with free water.
3. It cuts down on taxes for sewer upgrades by keeping water out of sewers and streams.
4. Clean, chlorine-free water is better for the plants and the soil.
5. You have free water for washing cars, windows and watering plants.

## Our Project

For our civics service project we are constructing and selling rain barrels. We decided to do this project because we care about the environment and wanted to make a difference. Each rain barrel costs \$50. All profits from our sale will be used to fund a class trip to perform additional community service. We are trying to raise money to pay for a bus to take us to Meadville, PA to work on a farm for a day.

Our barrels are made with PVC fittings and brass faucets which makes them safe for winter. Installation instructions are included.

Please support our project and reap the benefits of your very own rain barrel!

Thank you!
